COORDINATION CHEMISTRY REVIEWS

Contents

Professor Joseph Chatt CBE FRS
G.J. Leigh 1

Aspects of the chemistry of oxo-molybdenum enzyme centers
A.G. Wedd 5

The relative affinities of ligand atoms for acceptor molecules and ions: a long story revisited
S. Ahrland 13

The chemistry of group 10 metal *triangulo* clusters
A.D. Burrows and D.M.P. Mingos 19

New chemistry of vanadium(II)
G.J. Leigh and J.S. de Souza 71

Reactions of small molecules at transition metal sites: studies relevant to nitrogenase, an organometallic enzyme
R.L. Richards 83

Stereochemistry and molecular rearrangements of some six-, seven-, and eight-coordinate chelates of early transition metals
R.C. Fay 99

Compounds of elements of Groups 11–13 containing $(Me_3Si)_3C$, $(PhMe_2Si)_3C$ or related ligands
C. Eaborn and J. David Smith 125

Recollections of early studies on platinum(II) complexes related to Chatt's contributions to coordination chemistry
F. Basolo 151

From nitrogen fixation to catalysis, diagnosis and therapy
J.R. Dilworth 163

Some basic research in coordination chemistry and catalysis, related to applications for industry
D.T. Thompson 179

Transition metal complexes containing hydrazine and substituted hydrazines
B.T.Heaton, C. Jacob and P. Page 193
